2026.06 (June 2026)	6
2026.05 (May 2026)	6
2026.04 (April 2026)	7
2026.03 (March 2026)	8
2026.02 (February 2026)	9
2025.12 (December 2025)	10
2025.11 (November 2025)	11
2025.10 (October 2025)	11

Long-Term Support Releases

LTS 2026.03 (May 2026)	1
Tag Sources and Apply Tags to Queries	1
Preconfigured Tool Server Available Out-Of-The-Box	2
Create Agent Experiments	2
Create Templates for Agents and Custom Sources	2
Track Query Activity	2
Safeguards to Prevent Agents from Breaking	3
Query Agents through API	3
Refine Retrieval with New Settings	3
Integrate MCP Tools	3
Toggle Navigation Pane	3
Configure Embedding Models	4

LTS 2026.03 (May 2026)

Tag Sources and Apply Tags to Queries

Use tags to categorize sources based on criteria such as their content and key terms. Then, when coding an agent template, you can hardcode a query and apply the tags to your query to filter retrieval so that the query response includes only information from sources that have the selected tags. [Read more](#)

Preconfigured Tool Server Available Out-Of-The-Box

The RAM-RAG tool server is available in SAS Retrieval Agent Manager. When creating an agent, you can configure your agent to use one or more of the following tools from the RAM-RAG tool server. [Read more](#)

Tool	Functionality
list_collections	Lists the collections available to use for retrieval
list_files	Lists the files in a specific collection
retrieve	Retrieves context from a collection

Create Agent Experiments

Agent experiments enable you to create and evaluate potential configurations using different tools, templates, LLMs, and collections for an agent. These experiments help to identify the version that delivers the best performance before designating it as the agent's champion experiment. The champion configuration is then used as the agent experiment for retrieval and interaction in the Chat view. [Read more](#)

Create Templates for Agents and Custom Sources

New options in the Code Templates view enable you to create templates that streamline the process of adding agents and custom sources. [Read more](#)

Track Query Activity

A color-coded activity log was added to the Details window that opens when you click the Details View icon after you run a query against an agent or a collection in the Chat view. The activity log enables you to view details about the query, as well as details about each of the subqueries, LLM calls, retrievals, and MCP tool calls that were used to generate the response to your query. [Read more](#)

Safeguards to Prevent Agents from Breaking

New safeguards help prevent you from inadvertently breaking an agent. The safeguards include enhanced error logic and additional warning messages that take effect when you attempt to delete agent dependencies such as retrieval settings, collections, sources, and configurations.

Query Agents through API

Retrieval Agent Manager API enables you to query your agent from within external applications and automated workflows. For more information about how to use the API, access the API documentation. [Read more](#)

Refine Retrieval with New Settings

New settings enable you to further refine your retrieval process. You can now limit query results by number of tokens. In addition, new retrieval types enable you to select and provide the LLM with additional context. New table retrieval settings enable you to specify how context is retrieved from tables. [Read more](#)

Integrate MCP Tools

Enhance your agents with secure access to MCP tools that enable them to perform specific tasks, such as replying to emails, fetching real-time data, and editing files. This feature is available only to authorized users. [Read more](#)

Toggle Navigation Pane

A toggle button on the application banner provides you the ability to change which views are enabled in the navigation pane based on whether you follow a simplified workflow or an advanced workflow. This feature is available only to authorized users. [Read more](#)

Configure Embedding Models

SAS Retrieval Agent Manager enables you to add embedding models for use in downstream configurations. You can integrate embedding models from Azure OpenAI deployments or models from Hugging Face that are compatible with Text Embeddings Inference (TEI). [Read more](#)

Stable Releases

2026.06 (June 2026)	6
Trends Tab Available on the Dashboard	6
Add a System Prompt for an Agent	6
Add a System Prompt for an Agent Experiment	6
2026.05 (May 2026)	6
Spotlight Tab Redesign	6
MCP Tools Enhancements	7
Add Custom Metadata to a Source	7
2026.04 (April 2026)	7
Critical Change	7
Perform Complex Queries with Orchestrator Agents	7
Dashboard Enhancements and Redesign	8
Enable Agentic Retrieval for Faster, More Efficient Responses	8
Apply Tags to Prompts in Chat	8
2026.03 (March 2026)	8
Tag Sources and Apply Tags to Queries	8
2026.02 (February 2026)	9
Preconfigured Tool Server Available Out-Of-The-Box	9
Create Agent Experiments	9
Create Templates for Agents and Custom Sources	9
Track Query Activity	10
2025.12 (December 2025)	10
Safeguards to Prevent Agents from Breaking	10
Query Agents through API	10
Refine Retrieval with New Settings	10
2025.11 (November 2025)	11
Integrate MCP Tools	11
Toggle Navigation Pane	11
2025.10 (October 2025)	11
Configure Embedding Models	11

2026.06 (June 2026)

Trends Tab Available on the Dashboard

View the combination charts on the Trends tab in the Dashboard view to monitor cost and evaluate performance for a specified collection or agent over a selected period of time. [Read more](#)

Add a System Prompt for an Agent

You can now add a system prompt at the agent level. When you add a system prompt at the agent level, the agent-level system prompt overrides any system prompt configured in the Retrieval Settings view. [Read more](#)

Add a System Prompt for an Agent Experiment

You can now add a system prompt at the agent experiment level. When you add a system prompt at the agent experiment level, the agent-experiment-level system prompt overrides any agent-level system prompt and any system prompt configured in the Retrieval Settings view. [Read more](#)

2026.05 (May 2026)

Spotlight Tab Redesign

The Spotlight tab in the Dashboard view now focuses on visualizations that provide performance insights at a glance. The redesigned tab offers bar charts that highlight key metrics for collections and agents, such as average query cost and query error rate. Details about collections and their configurations are instead available in the Collections view. For steps to view collection and configuration details, see "View Existing Collections and Their Details." [Read more](#)

MCP Tools Enhancements

The New Tool Server window now enables you to create an MCP tool server from a remote REST API by using an OpenAPI specification and URL. In addition, you can now create an MCP tool server from a remote database connection. The window has also been redesigned to streamline the process of adding a new MCP tool server. [Read more](#)

Add Custom Metadata to a Source

You can now specify custom metadata columns for .csv and .xls files in a source. When agentic retrieval is enabled, agents leverage the user-defined metadata alongside semantic search to filter results and return more accurate, relevant responses. [Read more](#)

2026.04 (April 2026)

Critical Change

MCP Tool Enhancements

Enhancements to the MCP Tools feature enable SAS Retrieval Agent Manager to support external MCP servers with added security controls that require you to configure authentication options and manage secrets for external connections. [Read more](#)

Perform Complex Queries with Orchestrator Agents

Create orchestrator agents that can dissect queries into separate tasks and delegate those tasks to agents. This coordinated approach makes it easy to build

scalable, modular agent solutions that work together to deliver smarter results.
[Read more](#)

Dashboard Enhancements and Redesign

The Dashboard view now includes three tabs. The Spotlight tab provides collection details, including information about each configuration in a selected collection. The Resource Consumption tab view enables you to view details about your licensed capacity and resource usage in SAS Retrieval Agent Manager. The Query Observability tab view enables you to view details about the queries made against agents and collections in SAS Retrieval Agent Manager over a given period of time.
[Read more](#)

Enable Agentic Retrieval for Faster, More Efficient Responses

When agentic retrieval is enabled, agents automatically identify and search only the most relevant collections for a given query, reducing unnecessary retrieval work. This targeted approach can improve response times and lower processing costs compared to traditional retrieval, where all assigned collections are searched for every request. [Read more](#)

Apply Tags to Prompts in Chat

When you chat with an agent or collection, click the Tag icon to add a tag to your prompt. Tags enable you to specialize retrieval so that the LLM or agent retrieves only information from sources that have the selected tags. [Read more](#)

2026.03 (March 2026)

Tag Sources and Apply Tags to Queries

Use tags to categorize sources based on criteria such as their content and key terms. Then, when coding an agent template, you can hardcode a query and apply the tags to your query to filter retrieval so that the query response includes only information from sources that have the selected tags. [Read more](#)

2026.02 (February 2026)

Preconfigured Tool Server Available Out-Of-The-Box

The RAM-RAG tool server is available in SAS Retrieval Agent Manager. When creating an agent, you can configure your agent to use one or more of the following tools from the RAM-RAG tool server. [Read more](#)

Tool	Functionality
list_collections	Lists the collections available to use for retrieval
list_files	Lists the files in a specific collection
retrieve	Retrieves context from a collection

Create Agent Experiments

Agent experiments enable you to create and evaluate potential configurations using different tools, templates, LLMs, and collections for an agent. These experiments help to identify the version that delivers the best performance before designating it as the agent's champion experiment. The champion configuration is then used as the agent experiment for retrieval and interaction in the Chat view. [Read more](#)

Create Templates for Agents and Custom Sources

New options in the Code Templates view enable you to create templates that streamline the process of adding agents and custom sources. [Read more](#)

Track Query Activity

A color-coded activity log was added to the Details window that opens when you click the Details View icon after you run a query against an agent or a collection in the Chat view. The activity log enables you to view details about the query, as well as details about each of the subqueries, LLM calls, retrievals, and MCP tool calls that were used to generate the response to your query. [Read more](#)

2025.12 (December 2025)

Safeguards to Prevent Agents from Breaking

New safeguards help prevent you from inadvertently breaking an agent. The safeguards include enhanced error logic and additional warning messages that take effect when you attempt to delete agent dependencies such as retrieval settings, collections, sources, and configurations.

Query Agents through API

Retrieval Agent Manager API enables you to query your agent from within external applications and automated workflows. For more information about how to use the API, access the API documentation. [Read more](#)

Refine Retrieval with New Settings

New settings enable you to further refine your retrieval process. You can now limit query results by number of tokens. In addition, new retrieval types enable you to select and provide the LLM with additional context. New table retrieval settings enable you to specify how context is retrieved from tables. [Read more](#)

2025.11 (November 2025)

Integrate MCP Tools

Enhance your agents with secure access to MCP tools that enable them to perform specific tasks, such as replying to emails, fetching real-time data, and editing files. This feature is available only to authorized users. [Read more](#)

Toggle Navigation Pane

A toggle button on the application banner provides you the ability to change which views are enabled in the navigation pane based on whether you follow a simplified workflow or an advanced workflow. This feature is available only to authorized users. [Read more](#)

2025.10 (October 2025)

Configure Embedding Models

SAS Retrieval Agent Manager enables you to add embedding models for use in downstream configurations. You can integrate embedding models from Azure OpenAI deployments or models from Hugging Face that are compatible with Text Embeddings Inference (TEI). [Read more](#)
